

# Rosemount 5600 Series Radar Level Transmitter

## **THE 5600 SERIES FEATURES:**

- *Handles a wide range of process conditions due to high sensitivity and unique signal processing features*
- *High repeatability ensuring an extremely reliable and accurate level transmitter even in the toughest conditions*
- *Ultra-wide power supply, 24-240 V AC/DC, 0-60 Hz*
- *FOUNDATION™ fieldbus or analog 4-20 mA superimposed with HART®*
- *High flexibility with interchangeable transmitter heads and antennas*
- *No moving parts and no contact with the liquid*
- *Intelligent software support for easy configuration and setup*
- *Wide selection of antennas and materials*

## Legendary Rosemount Performance Customized For Your Level Process Applications

### Introduction

The Rosemount 5600 Series is an intelligent non-contacting radar level transmitter. Its high performance microprocessor allows for advanced signal processing and smart echo-tracking features. Together with its high sensitivity the radar transmitter can detect and evaluate all echoes within the tank or vessel. The 5600 Series support and assist the user to a successful configuration of the transmitter in process level applications, from easy to complex process situations.

### Applications

The Rosemount 5600 uses state-of-the art microwave technology to get highest reliability and precision. It measures the level of liquids and slurries. The transmitter operates in a wide range of temperatures, pressures, vapor gas mixtures, and various process conditions.

FIGURE 1. Rosemount 5600 Applications

- Applications in process vessels with agitators require a radar transmitter with the 5600's high sensitivity and advanced signal processing to separate the measuring signal from noise created by disturbances.

- Still-pipe or bridle mounting is recommended for LPG applications, where the surface sometimes is boiling, and for some extremely turbulent conditions. The pipe reduces foam and turbulence and also increases surface reflection.

- The Rod antenna is suitable for small nozzle openings on tanks with short measuring range.

- Solid materials, like cement, often give extremely small radar reflections, requiring the most sensitive antenna, the 18 inch parabolic.

Catalog 2004

# Rosemount 5600 Series

## Interchangeable Head

A 5600 Radar Level Transmitter consists of a Transmitter Head (TH) and a tank connection including antenna. The TH and the electronics inside are interchangeable without opening the tank.

FIGURE 2. Interchangeable Transmitter Head

## Antennas

### Rod Antenna

- Suitable for tanks with small openings.
- Existing tank flange can be used as the tank connection.

### Cone Antenna

- Suitable for free-propagation and pipe mounted installation.
- Cone extensions are available (see Figure 16 on page Level-49 and Table 9 on page Level-55).
- Optional Cone antennas with cleaning/flushing connection are available (see Figure 16 on page Level-49 and Table 10 on page Level-55).

### Process Seal Antenna

- The dish of the Process Seal is made of PTFE.
- Only exposes material suitable for hygienic or corrosive applications (see Figure 14 on page Level-48 and Table 7 on page Level-54).

### Parabolic Antenna

- Suitable for solid materials (example: cement).
- Withstand heavy contamination.

## Plate Design

FIGURE 3. Plate Design

Cone and Rod antennas, except the Cone with Flushing Connection, are designed with a protective plate as shown in Figure 3. The plate together with the antenna and tank sealing are the only wetted parts, exposing stainless steel (or alternative antenna material) and PTFE to the tank atmosphere. This allows the use of an existing flange, or a lower cost flange alternative. Loose flanges are available (Table 14 on page Level-57).

## Rosemount 2210 Display Unit

The Rosemount 2210 offers basic configuration using the 4 software keys on the display itself. Data presentation on the LCD can be customized and allows many viewing alternatives. The 2210 is also used if temperature sensors are to be connected to the 5600 Series. See Table 4 on page Level-51 for available versions.

## Electrical Connections

The transmitter has a power supply with an ultra-wide input range from 24 to 240 V AC or DC, 0-60 Hz.

The Transmitter Head has two separate junction boxes. One is for a non-intrinsically safe primary signal output and power supply cables. The other is normally used for intrinsically safe (IS) HART/analog outputs or optionally for a non-IS analog output.

Primary Outputs can be HART or FOUNDATION fieldbus, either IS or Non-IS. HART and additional analog outputs can be either active or passive depending on required options.

## Mechanical Mounting

The 5600 radar transmitter is easily carried to the tank top and mounted on a suitable nozzle or pipe. The radar transmitter should be installed as follows:

- Antenna oriented perpendicular to a horizontal surface.
- The transmitter should be mounted with as few fittings as possible within the beam angle.
- Filling inlets creating turbulence should preferably be kept at a distance.
- Choose as large antenna diameter as possible. A larger receiving area concentrates the radar beam and ensures maximum antenna gain. Increased antenna gain offers greater reception of weak surface echoes.

FIGURE 4. Rosemount 5600 Beamwidth

TABLE 1. Rosemount 5600 Beam Diameter and Angle

Antenna Type & Beam Angle	Distance, ft (m)			
	16 (5)	33 (10)	49 (15)	66 (20)
Beam Diameter, ft (m)				
Cone 3 in 25°	7.2 (2.2)	14 (4.4)	22 (6.7)	29 (8.9)
Rod/Cone 4 in/ Process Seal 4 inch 21°	6.2 (1.9)	12 (3.7)	18 (5.6)	24 (7.4)
Cone 6 in/ Process Seal 6 inch 18°	5.2 (1.6)	10 (3.1)	15 (4.7)	21 (6.3)
Cone 8 inch 15°	4.3 (1.3)	8.5 (2.6)	13 (3.9)	17 (5.3)
Parabolic 10°	3.0 (0.9)	5.6 (1.7)	8.5 (2.6)	11 (3.5)

FIGURE 5. Preferred Mounting <sup>(1)</sup>

## Measurement Principle

The level of the product in the tank is measured by radar signals transmitted from the antenna at the tank top. After the radar signal is reflected by the product surface the echo is picked up by the antenna. As the signal is varying in frequency the echo has a slightly different frequency compared to the signal transmitted at that moment. The difference in frequency is proportional to the distance to the product surface, and can be accurately calculated. This method is called FMCW (Frequency Modulated Continuous Wave) and is used in all high performance radar transmitters.

FIGURE 6. Frequency Modulated Continuous Wave

The FMCW method is based on a radar sweep with continuous changes in frequency.

## Measuring Range

The diagrams below show how the measuring range is influenced by the antenna type, dielectric constant of the liquid ( $\epsilon_r$ ) and the process conditions. For optimum performance the maximum measuring distance should be kept within the range indicated with darker color in the diagrams. Values are valid for free propagation measurement without still-pipes (bridles).

For liquids with  $\epsilon_r$  that are smaller than 1.9 such as liquefied gases, an 8 inch or bigger diameter antenna is recommended if measurement is done with free propagation. In this case the measuring range in calm surface tanks is in typical cases 50 ft (15 m).

To increase the measuring range further in turbulent tanks, a still-pipe can be used. For still-pipe mounted 5600 transmitters the typical measuring range is 115-160 ft (35-50 m) in turbulent tanks with liquids having  $\epsilon_r$  less than 1.9.

TABLE 2. Categories of liquids

a	Oil, gasoline and other hydrocarbons, petrochemicals (dielectric constant, $\epsilon_r=1.9-4.0$ )
b	Alcohols, concentrated acids, organic solvents, oil/water mixtures and acetone ( $\epsilon_r=4.0-10$ )
c	Conductive liquids, e.g. water based solutions, dilute acids and alkalis ( $\epsilon_r > 10$ )

FIGURE 7. Applications with calm product surface<sup>(1)</sup>

FIGURE 8. Applications where the product is gently stirred, causing minor turbulence<sup>(1)</sup>

FIGURE 9. Applications with turbulent product surface conditions<sup>(1)</sup>

(1) *Measuring range in ft (m).*

## System Integration

Level values are transmitted from the transmitter as analog 4-20 mA signals superimposed with HART or FOUNDATION™ fieldbus. The analog outputs are either passive for connection to powered cables or active providing signal power for 4-20 mA. Analog outputs can also be specified as intrinsically safe or non-intrinsically safe.

Basic configuration and setup can be done on a HART communicator, via the 2210 Display Unit, AMS, or DeltaV (for FOUNDATION fieldbus). Rosemount Radar Master is a PC based software package which allows for full configuration, including advanced features such as Spectra plots, offline/online configuration capabilities, logging, extensive online help, etcetera. To communicate with the device using Radar Master a HART Modem is required in between (see HART Modem on page Level-57).

FIGURE 10. System Integration using the HART Communicator

## Specifications

### GENERAL

#### Product Designation

5600 Series Radar Level Transmitter

#### Operating principle

10GHz FMCW radar

#### Beam angle

See Figure 2-12

#### Microwave output power

Max 1.0 mW

#### Internal calibration

Internal digital reference for automatic compensation of radar sweep

#### Signal processing

Powerful and advanced digital signal processing using FFT and advanced echo handling software

#### Temperature measurement

1-3 spot elements, PT100 or CU100, or 6 spot elements with common return. Input accuracy  $\pm 0.9^{\circ}\text{F}$  ( $\pm 0.5^{\circ}\text{C}$ )

### MEASURING PERFORMANCE

#### Instrument accuracy (Under reference conditions)

$\pm 0.2$  in ( $\pm 5$  mm)

#### Resolution

0.04 in (1 mm)

#### Repeatability

$\pm 0.04$  in ( $\pm 1$  mm)

#### Measuring range

0-164 ft (0-50 m)

#### Update time

100 ms

#### Processors

32-bit Floating DSP

### DISPLAY/CONFIGURATION

#### Display (factory mounted on transmitter)

Protection class IP67

With weather/dirt protection cover; graphical LCD display 128 by 64 pixels with 4 control soft-keys and 7 text lines with 16 characters/line for display and configuration.

#### Display (remote mounted)

Same as above, mounted in separate enclosure, protection class IP67; max cable length, display - radar transmitter: 330 ft. (100 m); cable type: 4 wire shielded instrument cable, min.  $0.5\text{ mm}^2$ , (AWG 20).

#### Display with Temperature Inputs (remote mounted)

Same as above, mounted in separate enclosure, protection class IP67; max cable length, display - radar transmitter: 330 ft (100 m); cable type: 4 wire shielded instrument cable, min.  $0.5\text{ mm}^2$ , (AWG 20); temperature measurement 1-3 spot elements PT100 or CU100, or 6 spot elements with common return.

#### HART Device

Rosemount Hand-held communicator 275 / 375  
Rosemount AMS software

#### PC/remote configuration <sup>(1)</sup>

(NOTE: HART Modem required, see page Level-57)

Rosemount Radar Master, Powerful Windows based configuration software.

---

(1) *Recommended PC hardware specification:  $\geq 1$  GHz processor,  $\geq 128$  MbRam, Operating system of Win NT or Win2000.*

## ELECTRIC

### Power supply

Ultra wide power supply 24-240 V AC or DC 0-60 Hz

### Power consumption

Maximum 10 W, Nominal 5 W

### Outputs

#### Primary output:

Alternative 1: HART + 4-20 mA current loop (non-IS or IS option)

Alternative 2: FOUNDATION fieldbus (optional IS option)

#### Secondary Outputs:

Analog 4-20 mA current loop, active or passive (non-IS or IS option)

### Analog Output Characteristics

#### Type

Analog 4-20 mA Current Loop, active (with) or passive (without loop supply)

#### Galvanic isolation

> 1500 V RMS or DC

#### Analog Output Characteristics

See Product Certificates

#### Range

4-20 mA

#### Alarm level

3.8 mA, 22 mA or freeze; NAMUR, Rosemount Alarm levels available

#### Resolution

0.5 $\mu$ A (0.003%)

#### Linearity

$\pm 0.01\%$

#### Temperature drift

$\pm 28$  ppm/ $^{\circ}$ F ( $\pm 50$  ppm/ $^{\circ}$ C)

#### Output impedance

>10 M $\Omega$

#### Voltage compliance

7-30 V (passive output)

#### External loop resistance

<700  $\Omega$  (passive output with 24 V external supply)

<300  $\Omega$  (active output)

### Fieldbus Output Characteristics

Fieldbus Voltage limits: 9 to 32 V

Current Draw: 12.5 mA

For I.S. Applications:

$U_i < 30$  V

$I_i < 300$  mA

$P_i < 1.3$  W

$C_i = 0$   $\mu$ F

$L_i = 0$  mH

### Output cabling

Twisted and shielded pair; min. 0.5 mm<sup>2</sup> (AWG 20)

### Cable entries

3  $\times$   $\frac{1}{2}$  inch NPT; for cable glands or conduit entries

Optional: cable gland kit, incl 3  $\times$  EEx e approved (CENELEC)  $\frac{1}{2}$  inch NPT cable glands

Optional: 3  $\times$  EEx e approved (CENELEC) adapters  $\frac{1}{2}$  inch NPT/M20

### Display Output Characteristics

#### With Temperature Output

See Product Certificates

#### Without Temperature Output

See Product Certificates

## MECHANICAL

### Housing/Enclosure

Permanent moulded cast aluminium, chromed and powder painted

### Flanges

ANSI, DIN standard,

Material: Stainless steel 316L and Stainless Steel EN 1.4404

Optional: Hot-galvanized carbon steel

### Weight, excl, flange

18 lbs (8 kg)

☐ Splash Loading    ☐ Vortex

★ Indicates Default Factory Configuration

## Tank Geometry

Tank Shape<sup>(1)</sup>: Select a Tank Type corresponding to the actual tank on which the device is mounted. If the device is mounted on a Tank Type that is not available as an individual selection choose Unknown.

☐ **Unknown★**    ☐ Vertical Cylinder    ☐ Horizontal Cylinder  
☐ Spherical    ☐ Cubical<sup>(2)</sup>

Tank Bottom<sup>(3)</sup>: Select a Tank Bottom Type that corresponds to the actual shape of the tank bottom.

☐ **Unknown★**    ☐ Flat<sup>(4)</sup>    ☐ Dome/Dish/Bullet  
      
☐ Cone    ☐ Other  
    (Inclined or obstructed due to heating coils, pipes, etc.).

Tank Height:

☐ m    ☒ mm★    ☐ ft    ☐ in

(1) See page Level-61 for examples of each tank type.

(2) A cubical tank type is defined as a box shaped tank with right angles.

(3) Tank Bottom Type is only applicable for Vertical Cylinder and Cubical Tanks.

(4) Bottom of the tank is <5°.

## Fitting Dimensions

Please fill in the dimensions (according to selected variable unit)

☐ Nozzle    ☐ Stilling Well    ☐ Bypass Pipe

# Rosemount 5600 Series

00813-0100-4024, Rev CA  
Catalog 2004

★ Indicates Default Factory Configuration

## Analog Output (4-20mA analog output) (Not applicable for FOUNDATION fieldbus devices)

### Primary Variables (Analog Output 1):

PV Source (Var. Assignment): ☐ **Level★** ☐ Distance ☐ Level Rate  
☐ Volume (See page Level-61) ☐ Temperature 1 (See page Level-60) ☐ Signal Strength

Lower Range Value (4mA): \_\_\_\_\_

Upper Range Value (20mA): \_\_\_\_\_

Alarm Mode: ☐ Low ☐ High ☐ **Freeze★**

### Secondary Variable (Optional Analog Output 2):

SV Source (Var. Assignment): ☐ Level ☐ **Distance★** ☐ Level Rate  
☐ Temperature 1 ☐ Volume ☐ Signal Strength

Lower Range Value (4mA): \_\_\_\_\_

Upper Range Value (20mA): \_\_\_\_\_

Alarm Mode: ☐ Low ☐ High ☐ **Freeze★**

## Temperature Measurement (If applicable)

Number of Temperature Sensors (1-6): \_\_\_\_\_

Type of Temperature Sensor: ☐ **Pt100★** ☐ Cu90

Temperature Sensor Locations:

Measurement Units: ☐ °F ☐ **°C★** ☐ °K

★ Indicates Default Factory Configuration

Volume Calculation (If applicable)

Volume is calculated based on ideal shapes or by an entered Strapping table (up to 100 points). The Configuration Data Sheet (CDS) allows for up to 20 strapping points to be pre-configured at factory using the CI (CDS) option. Provide an additional file with volume table to be imported if more than 20 points are required.

Measurement Units:

- ☐ ft<sup>3</sup>      ☐ m<sup>3</sup>      ☐ liters      ☐ US gals      ☐ bbl

If your transmitter is ideal shape, please select what ideal shape to use. Add the dimensions for the selected shape.

- ☐ Vertical Cylinder      ☐ Horizontal Cylinder      ☐ Sphere

- ☐ Vertical Cylinder with Bullet Ends      ☐ Horizontal Cylinder with Bullet Ends

- ☐ Strapping Table (Up to 100 points can be used. Data may be submitted to the factory using a data spreadsheet program.)
