—! CAUTION —

The IGP10 sanitary replacement sensors listed in the tables above are for use with electronics housings vented with a membrane breather plug. These replacement sensors for the IGP10 sanitary versions are distinguishable by the vent tube shown in Figure 4. Conversely, housings that do not have a membrane breather plug must be used with sensor assemblies not having a vent tube. For users with an existing IGP10 sanitary transmitter, not having a housing with a membrane breather plug, that require a replacement sensor assembly, contact IPS for a replacement housing assembly with a membrane breather plug.

— NOTE

The pressure seals shown below are used with IAP10 and IGP10 Transmitters. Pressure seals are not replaceable items; they must be replaced with the entire transmitter/seal assembly. In this case, both transmitter and pressure seal Model Numbers must be used for the assembled transmitter/seal system. Refer to data plates attached to transmitter and pressure seal(s) for applicable part numbers, or refer to PSS 2A-1Z11 A for Pressure Seal Model Codes
